Just add Scout.

I am **SCOUT**, the brand new intelligent system software from Bucher Emhart Glass, I am the foundation for all future inspection.

Are you ready for something new in inspection technologies?

Are you a user of Veritas iB or Veritas iC?

Are you ready for the glass plant of the future?

Upgrade your existing Bucher Emhart Glass equipment to the brand new intelligent system software – the foundation for all future inspection.

Bucher Emhart Glass offers upgrades for the Veritas iC and Veritas iB that will improve inspection accuracy, machine reliability and system sustainability. These upgrades revitalize the Veritas machines and prepare them for the next furnace campaign in your factory.

The upgrades replace the existing Veritas electronics with the new SCOUT™ technology platform, now included on new FleXinspect B, C, and BC machines. When you update your Veritas machines to operate on the SCOUT technology platform, you can be assured that the inspection machines in your factory are capable of performing at the highest level with all of the new features and functionality available in today's FleXinspect B, C and BC.

Shortly, your Account Manager will be in touch with you to discuss your personal needs.

Upgrade to SCOUT – increase your plant's reliability and get it ready for the future!
